

Don't lose money
by using the wrong charger

Opt for a **Delta-Q charger**
and double the lifespan
of your battery

So why choose a Delta-Q charger?

- Charger lasts up to 8 times longer
- Electricity savings and shorter charge times
- Fits on multiple applications
- Easy to integrate
- Customisable charge profiles

Get more out of your battery thanks to the customisable charge profiles

The big difference between the Delta-Q charger and a standard battery charger is that Delta-Q uses the specific battery charging profile created by the manufacturer.

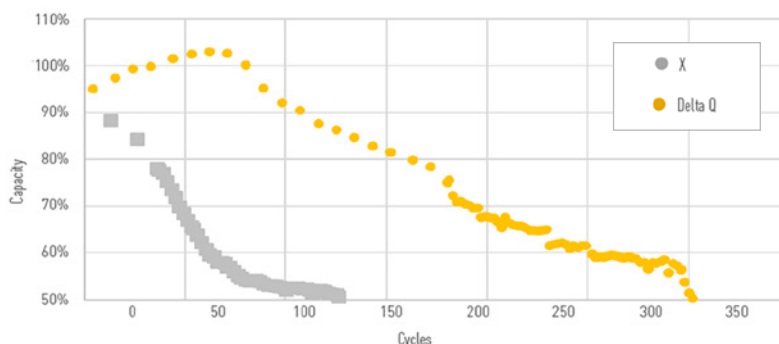

What does this mean?

With a standard battery charger, your battery will have 50% of its original capacity left after about 130 cycles. When you use a Delta-Q battery charger, you're able to use the original battery charging profile. This makes that your battery will only be at 50% capacity after 300 cycles.

Conclusion: with Delta-Q you'll get twice as much out of your battery.

Battery capacity:

standard battery charger vs Delta-Q charger

On which machines can I use the Delta-Q charger?

- ▶ Mobile elevating work platforms
- ▶ Ground support equipment
- ▶ Material handling equipment
- ▶ Personnel & burden carriers
- ▶ Scrubbers & sweepers
- ▶ Terminal tractors
